

PRODUCT BULLETIN - P0104

Issued: April 30, 2004

Products: Moyno[®] Downhole Pump Models: S025, S045, T135 and T250 (Imperial)
S4, S7, T22 and T40 (Metric)

Notice: The stators of these particular models have been redesigned to incorporate an integral 2-7/8" – 8RND EUE API threaded box on the discharge end of the stator. Options for the intake end of the stator include either a 2-3/8" or 2-7/8" – 8RND EUE API threaded box and a corresponding tag bar. Previously, these stators were provided with separate couplings on the externally threaded stator. This external thread required special cross-over couplings and had the potential of being a location of failures due to over-torque or corrosion. The 2-7/8" connection on the discharge end of the stator eliminates clearance problems associated with the orbit of the rotor head.

Effective Date: All pumps shipped from either the Edmonton or Willis facilities after April 30, 2004 will have this modification.
