

PRODUCT BULLETIN P0305

Issued March 24, 2005

Products: Moyno® Ultra-Drive® DA3, DD1, DD1-H & DD1-HH Drive Heads

Notice: The hydraulic brake adjustment valve and associated hoses have been removed from the listed drive heads. Engineering determined that the benefit / cost ratio was less than favorable. Dynamometer testing, in conjunction with field data, showed that the flow through this flow path resulted in the generation of additional heat in the hydraulic fluid. In addition, the small amount of adjustment afforded by the valve was of little consequence to operators.

When drive heads are refurbished, Engineering recommends same modification be done to eliminate the valve and hoses.

Effective Date: Shipments of drive heads with this modification began in January 2005.
